What is The Best Sewing Thread?

In order to help you find the best thread that will help you bring out the best out of your projects, we have collected the 26 best sewing threads and reviewed them for you. Make sure to read our reviews before you make your final purchase. And check out our comparison chart for all the important details.

What is The Strongest Sewing Thread?

Before we get into the reviews, we would like to teach you something about sewing machine threads. For example, if you wonder what is the strongest thread, it is nylon. According to our research, nylon represents one of the well built and stretch synthetic threads on the market. It is known to be flexible!

It has a high-strength-to-size ratio, unlike polyester thread. Our research says that high tensile strength makes this type of sewing needle perfect for heavy-duty projects and sewing heavy fabrics.

Watch video: [Different Types of Thread for Sewing](#)

Thread Types: According To The Fiber

Considering the countless types of threads, it is understandable that choosing the right thread can be a nightmare, especially for beginners! To narrow your choice, we will present the thread types according to the fiber and purpose. Now: let's begin with explaining the few thread types according to the fiber.

Cotton Thread

A cotton thread can be used for light and medium weight cotton fabrics. It gives a smooth finish and is without stretch. A cotton thread is a heat resistant thread, so you do not have to worry about burning it. It does not have much stretch, so if you use it on different materials than cotton material, it may break!

Polyester Thread

Polyester thread works with all types of fabrics. However, you should be careful when pressing with a hot iron. Polyester threads burn easily but they have good stretch, so you can use them for sewing knits and woven fabrics. If you use this thread for topstitching, it will give your project a silky smooth finish!

However, keep in mind that the quality of different polyester threads depends on the brand. So, choose your polyester thread carefully. It can break cotton fibers after time since cotton is weaker. Still, we tend to overlook the disadvantages of this thread and recommend it for completing different sewing projects!

Nylon Thread

Nylon thread is a synthetic thread such as polyester. And can be used for working with almost any type of fabric. Nylon threads come in different weights. A heavyweight nylon thread is ideal for sewing heavy duty projects. It is semi-transparent and considered as the strongest sewing thread among all.

However, it is not indestructible. It could melt if you press it with a very hot iron, so pay close attention.

All-Purpose Thread for Sewing

As you already suppose, an all-purpose thread is used for sewing any type of fabric. It is a blending mix of cotton and polyester. It is a polyester thread coated with cotton. It is the best thread for sewing with a sewing machine. You can use it for handmade fabrics, knits, synthetic, woven fabric, and much more.

The polyester property in this thread is what provides stretchiness, while the cotton provides easiness in sewing. However, the best part is that you do not have to worry about pressing on it with a hot iron. It is heat resistant, meaning it will not melt. You will not face any issues when applying heat to your material.

Metallic Thread

Metallic threads are often used for decorative purposes. And they require a special needle for sewing. In the bobbin, a bobbin weight thread or an all-purpose thread is used. However, possible thread breakage may occur if you sew at a higher speed. If you sew with care, this thread can do miracles for your crafts!

Silk Thread

A silk thread is a fine satiny thread which you can use for all types of fabric. It is perfect for working with heavier and delicate fabrics since the fine thread does not leave holes in the material. You can use a silk thread for applique work since the thin thread appears transparent but provides a smooth finish as well.

The silk thread is a very flexible, elastic thread. However, it is also very strong. The only disadvantage of this type of thread is the insane price. Most silk threads cost a lot. A silk thread is a costly sewing thread.

Rayon Thread

If you want a thread with a nice finish that you can use for decorative purposes, but a rayon thread. It is a delicate thread. And keeps breaking unlike the rest of the threads that we just mentioned. It provides a smooth finish beside the fact that it is quite prone to breaking. Not recommended for sewing seams.

Wolly Nylon

Have you heard of a woolly nylon thread? It is a type of stretch thread used for stretch seams. Now: let's learn more about thread types according to their purpose and choose the one that matches your needs.

Watch video: [First Steps: Threading Your Sewing Machine](#)

Thread Types: According to Their Purpose

We have mentioned that you can choose the right thread according to the fiber and purpose. Read on to you want to learn the use of different types of sewing machine threads and how to choose the right one.

Serger Thread

As you suppose by the name, serger threads are used in sergers and they are not as thick as the normal threads. But sergers usually uses more than just one strand to work, so their size does not matter much.

Elastic Thread

Elastic threads will gather and elasticize your material immediately. With an elastic thread in the bobbin, shirring is done. Keep in mind that these sewing threads should be hand winded on the bobbin.

Machine Embroidery Thread

Machine embroidery thread comes in polyester, rayon, and cotton. It is used in machine embroidery as you suppose. Also, you can choose any color you want when it comes to machine embroidery threads.

Bobbin Thread

A bobbin thread is a fine but delicate type of thread often used in the bobbin for machine embroidery that will make sure that the back of your creation does not appear cluttered. It can be used for machine basting and hemming since it is lightweight and very thin.

Basting Thread

A basting thread is a lightweight, very thin thread often used to baste material. You can easily remove it, unlike the regular threads. Next, you have the lingerie thread. Keep on reading to find out more about it.

Lingerie Thread

A lingerie thread is a strong nylon thread with a stretch that is used for machine embroidery as a bobbin thread and for beadwork. Wash away thread, on the other hand, is ideal for basting stitches and washes away once the stitching is finished, while the ribbon floss is used for smocking and decorative stitches.

Fusible Thread

A fusible thread appears like dental floss. It is a nylon thread that melts at a low temperature. It is best for putting together applique pieces. A topstitching thread, on the other hand, is a heavier, strong and thick polyester thread. It is used for heavy-duty stitching and topstitching.

Quilting Thread

Quilting threads are durable and very strong threads used for quilting (machine and hand). And you can use them without worrying about breaking the needle in half. Invisible threads, on the other hand, are colorless polyester threads that appear almost invisible and transparent. They are ideal for hemming.

Watch video: Tips for Using Invisible Thread

Button and Carpet Thread

If you want a hand sewing thread, this is the type you need. A button and carpet thread that is made of cotton and coated polyester. And it is a very heavy thread that you can use for bobbin embroidery work.

What's The Difference between Quilting Thread and Regular Thread?

As we mentioned before, a quilting thread is a durable and very strong thread that you can use for hand and machine quilting. And since this type of needle is durable, you do not have to worry about breaking it in half. Regular threads, on the other hand, are flexible but strong enough to handle high-speed work.

Buying A Sewing Thread Near You

If this is your first time buying sewing threads, you might be wondering: where do I purchase a sewing thread? Firstly, you can do it online! And you have come to the right place because we have prepared product reviews + full buyer's guide down below. You can also make your own research.

- Super easy to use and better than beeswax
- Non-toxic, acid-free and America product
- Made for both hand and machine sewing
- Reduces friction and provides protection
- Improving and boosting your thread's look

Cons

Some buyers expected better performance

Things to Consider Before Buying a Sewing Thread

When buying a sewing thread, there are some things to consider before you make your final purchase. Read on to find out how to pick the right sewing thread and get the best out of your sewing.

The material that you plan to sew

The fabric you are sewing is important since heavy fabrics require strong and thick sewing thread, unlike light fabrics that can be sewn with fine lightweight sewing thread. If you want to sew denim, you should find the best thread for denim. To make strong stitches, you will need a strong sewing thread like nylon.

The sewing machine that you will use

What sewing thread you buy depends on the sewing machine you will use too. Regular sewing machines can use thin or thick threads. However, overlock and serger machines operate best with thick threads to skip on lumps, primarily on seams. To pick the proper sewing thread, check the types of threads above.

Tensile strength, color and spool size

Tensile strength is the amount of force that the thread can handle before it breaks. This depends on the type of thread. Commonly, a nylon thread has a higher tensile strength than a polyester thread. A cotton thread, on the other hand, has a low tensile strength. The type of threads you purchase depends on the fabric that you plan to sew. Light fabrics require cotton threads, while heavy fabrics need nylon stitches.

Color is important as well. As you probably know, sewing threads come in different colors. Some threads are sold in one color while others come in different bobbins and spools, each colored differently. Sewing thread sets in one color don't offer that many options. However, it all depends on your project.

If you don't sew different colored projects, one color thread should get the job done. For example, if you stitch curtains for the entire home, you will need one color thread to get even results. However, if you do clothes repairs and work with many colors, you should definitely purchase a multi-colored thread set.

Spool size is measured in yards. And you should consider this because it appears the amount of thread you get. So, before you make your purchase, make sure to check the spool length and pick the right size for your project. If you are not sure about the size, always go with the long one. The longer, the better.

Final verdict

Now that you know everything you need to know about sewing machine threads like types of threads and how to pick the right one, I hope that you find a match in our comparison chart above. Remember that the thread type, fabric type, and color type can make a major difference in the quality of stitching.

Therefore, determining what fabric you will work with and picking the right thread is crucial for stitching the perfect seams. However, do not forget to maintain your machine the right way on a regular basis if you want to make most out of your sewing threads. Also, make sure to store all your threads properly.

Remember not to place heavy or heat objects on the thread box to avoid damaging the plastic bobbins and threads. Now: let's answer some of your most common questions about sewing threads.

FAQ About The Best Sewing Machine Threads

Can I use a polyester thread on cotton fabric?

We have said before that polyester fiber is stronger than natural thread. So, the polyester thread will break the cotton fiber of the material, eventually. You can use a polyester thread on cotton fabric. But it is not recommended. For quilting, always search for threads named "hand quilting"/"machine quilting".

Is it better to sew with cotton or polyester thread?

It is not recommended to sew natural fibers with polyester threads since they are stronger than most natural threads. This can cause the cotton fiber of the material to break because of the polyester thread. In overall, what thread you use, depends on the material that you sew and what results do you wish for.

What kind of thread do you use for canvas?

Our research says that a heavy-duty thread (size 40) made from cotton, cotton-wrapped polyester or polyester is perfect for canvas. Upholstery/wool thread is very strong as well and often used for canvas.

What thread do you use for stretchy fabric?

After hours and hours of research, we have found out that the greatest threads for stretchy fabric are textured nylon threads or textured polyester threads (check our reviews for product recommendations). They are best for coverstitch seams and overedge since they provide great seam elasticity and coverage.

Can you quilt with polyester thread?

You may be wondering, can I quilt with polyester thread? And the answer is: YES! Most traditions and myths say that the polyester thread will break the quilt. However, those assumptions are false. A glazed cotton thread can do the same under extreme use. Under normal use, non-glazed softer threads will not cause this problem. Meaning, you can quilt with any type of good thread, except nylon. Always pick your thread based on appearance, feel and most importantly, quality. Avoid wiry threads with a glaze coating.

What weight is Coats and Clark all purpose thread?

We have reviewed this thread above. Make sure to check it out for more details. However, for those who are interested in the specifications only, the Coats and Clark all purpose thread is 300 yards, 100% polyester, strong, 30 weight and durable. It is great for both machine and hand sewing on any material.
